

Wabtec Digital Intelligence

RailDOCS™

Core Capabilities

- Manage test inspection component configuration guideline and interaction
- Track manage employee time
- Offer instant access to info requested during inspection
- Closed loop defect tracking
- Data recorded using latest technologies

Differentiating Features

- Integrated module maintain all fleet-wide asset plan and employee management
- Store large database of railroad CM asset specification and inspection data in North America
- Software deployment management over Cloud matching technology
- Contain power over specified compliance rule engine
- Predictable resource for workforce optimization
- Using the latest technology can be added by local admin

Optimized Outcomes

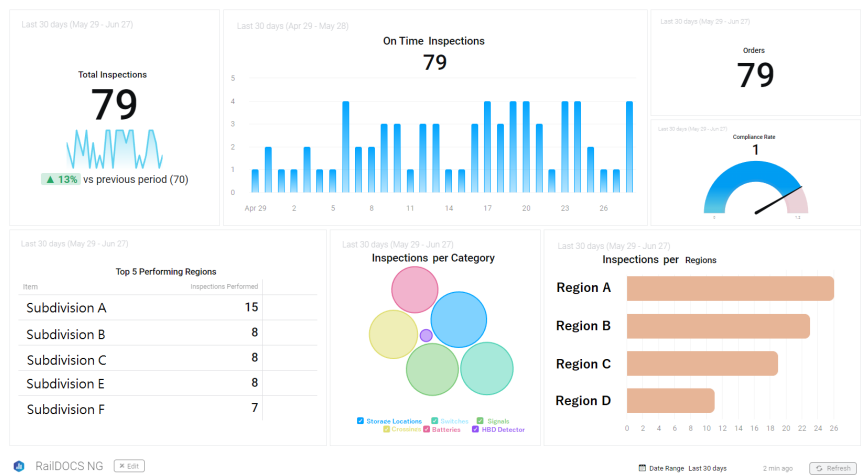

- Help ensure regulator compliance
- Boost employee productivity and performance management
- Manage wide location spare service bulletin application software and plan

Boost productivity and keep wayside maintenance efforts on track.

Ensuring the reliable and efficient operation of our signal and train control system is essential. Optimizing daily operations of railroad maintenance department require a turnkey solution. RailDOCS has been the leader for over 10 years with best in class support team.

RailDOCS is a cloud-based mobile software platform for configuration management, testing, inspecting, reporting and maintaining track, signal, card, bridge and communication equipment. It also provides the means to track and manage signal, train crew and dispatcher employee time and availability. RailDOCS core over 1 million test forms for 100,000 locations and help comply with railroad state and federal regulations.

The result? Improved preventative maintenance. Greater compliance with regulations. And greater employee productivity.
