VMS

Video Management System

A multi-service video surveillance solution

With Faiveley Transport's VMS, public transport operators benefit from an efficient video surveillance solution ranging from on-board recording to data management. Innovative and highly configurable, VMS will fulfil all the specific needs of your activity.

• **Security**
VMS is the best means to help you identify threats and make the right decisions at the right time.

• **Operations**
VMS offers you the possibility to simplify your daily operations. Incident response times are reduced thanks to an advanced alarm management system.

• **Maintenance**
VMS provides tools to facilitate the maintenance of the CCTV fleet. System availability is optimized through periodic collection of equipment status.

CUSTOMER BENEFITS :

- ➕ Reduction of the response time to alerts and police requests
- ➕ Time saving in operations and maintenance
- ➕ Great possibilities of customization
- ➕ Easy upgrade according to the evolution of your needs

VMS consists of equipment on board vehicles and of ground applications in direct interface with the actors of security, operations and maintenance.
 The set of ground applications forms the **Supervision and Control System (SCS)**. It provides access to all essential information (video footage, vehicle position, operation and maintenance data).

Get the information

- Real-time fleet management tools
- Advanced search features on operations events (notifications): time slot filter, geographic perimeter, fleet, category ...

Manage the information

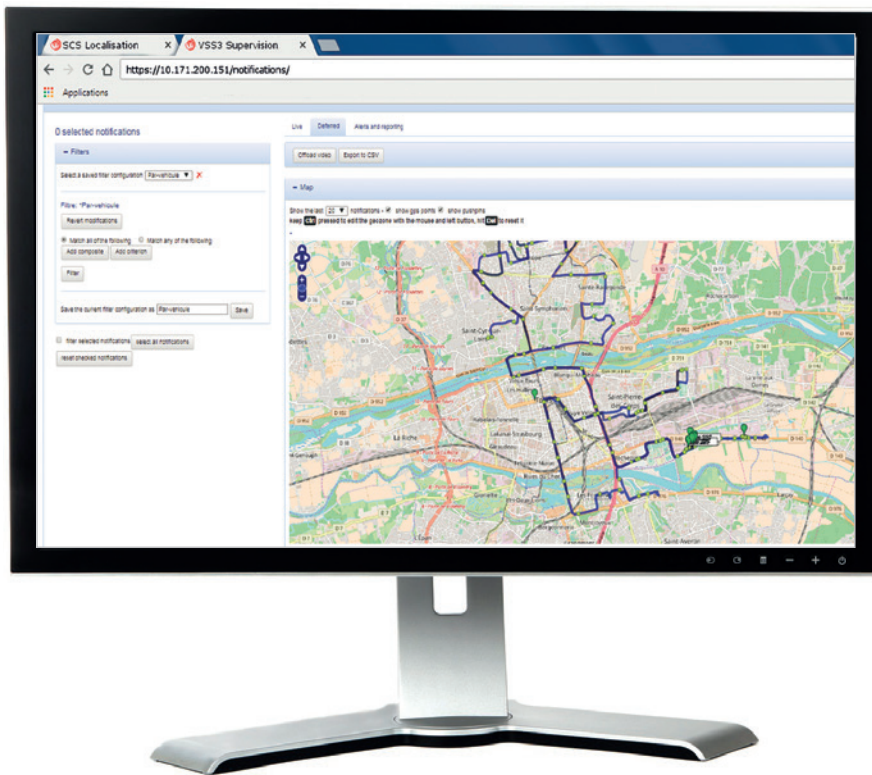

- Customization of notifications (nature, number, type, frequency)
- Various options of reporting of the notifications

Connect to the CCTV

- Download of video footage from on board recorders
- Request of image capture from any camera in real-time or delayed mode

Administrate the system

- Automatic and centralized software and configuration installation/update
- Remote wake-up of the on board CCTV system
