# ABOUT DUROX

---

Durox is a “one stop shop” providing a complete line of high performance products designed to maximize the life cycles of engines and component parts. Durox designs and manufactures a range of gaskets, rubber seals, extrusions and other related components with a focus on railway and industrial market applications.

## Product Examples:

- Die Cut Gaskets: Locomotive Gaskets, Exhaust Gaskets, Traction Motor Gaskets
- Molded Rubber Products: Pipe Coupling Gaskets & Seals; Cable & Pipe Cleats
- Spliced Rubber Seals: Corner Molded Door & Window Seals, Spiced O’Rings
- Extrusions: Door Seals, Window Glazing, Number Boards
- OEM & Customer Specific Gasket & Seal Overhaul Kits

## Quality Certifications:

- AAR M-1003
- ISO 9001:2008

**Die Cutting**  
(ATOM Flashcut Flex)

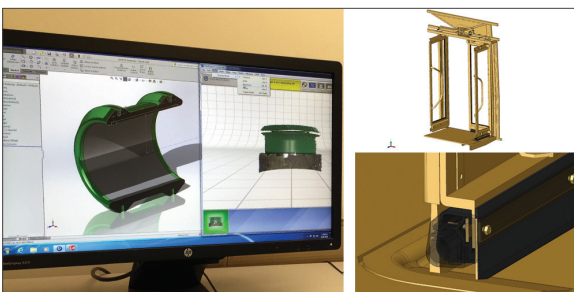

**Custom Extrusion**  
(Continuous Salt Line & Microwave Curing)

**Custom Rubber Molding**  
(Compression & Transfer Molding Presses)

**Custom Compound Mixing**  
(Complete In-House Mixing Capabilities)

**Design & Development Engineering Support**  
(From Concept & Design, to Prototype & Production)

**Testing & Validation**  
(Comprehensive Materials Lab & Test Equipment)

# SWELLEX™ GASKET MATERIAL

---

Swellex™ is a Durox proprietary controlled swell compressed sheet gasket material that creates its own load when it comes into contact with oil or water. This controlled swell provides superior conformation to irregular surfaces created by worn flange surfaces. Because the material does not degrade in contact with oil or water, it is an ideal gasket material for a wide range of applications.

## Benefits:

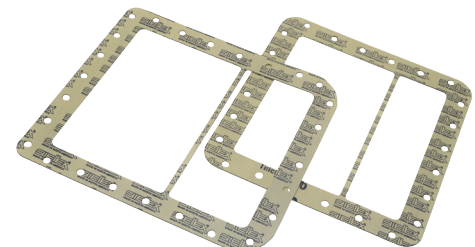

- The unique blend of synthetic fibers with custom blend rubber binders creates comprehensive load in light weight flanges in oil and water.
- The load created by our proprietary controlled swell provides and retains superior torque retention.
- More compressible than standard fiber gaskets and seals with lower flange loading.
- Because its crush strength is many times higher than a rubber gasket, it provides excellent sealing in applications that would crush traditional rubber seals.
- The compressed material does not wick or weep system fluids which helps to optimize overall machinery performance and improves plant safety.

## Values:

- Reduce Inventory: The variety of elastomers in the blend excel in a wide range of services and replace those products that only swell in oil.
- Minimize Costs & Maintenance Time: Swellex™ seals worn surfaces on flanges that would traditionally be replaced more frequently.
- Quicker Installation Time: Eliminates the need to use additional sealants on gasket or flange surfaces.
- Reduce Labor & Overtime: The flange free release coating on the gasket insures fast and easy removal of the product.

## Ideal For:

- |                 |                    |
|-----------------|--------------------|
| • Compressors   | • Fuel Pumps       |
| • Fuel Pumps    | • Cast Flanges     |
| • Oil Pumps     | • Lube Oil Systems |
| • Water Pumps   | • Radiators        |
| • Access Covers | • Water Systems    |
| • Generators    | • Fuel Systems     |

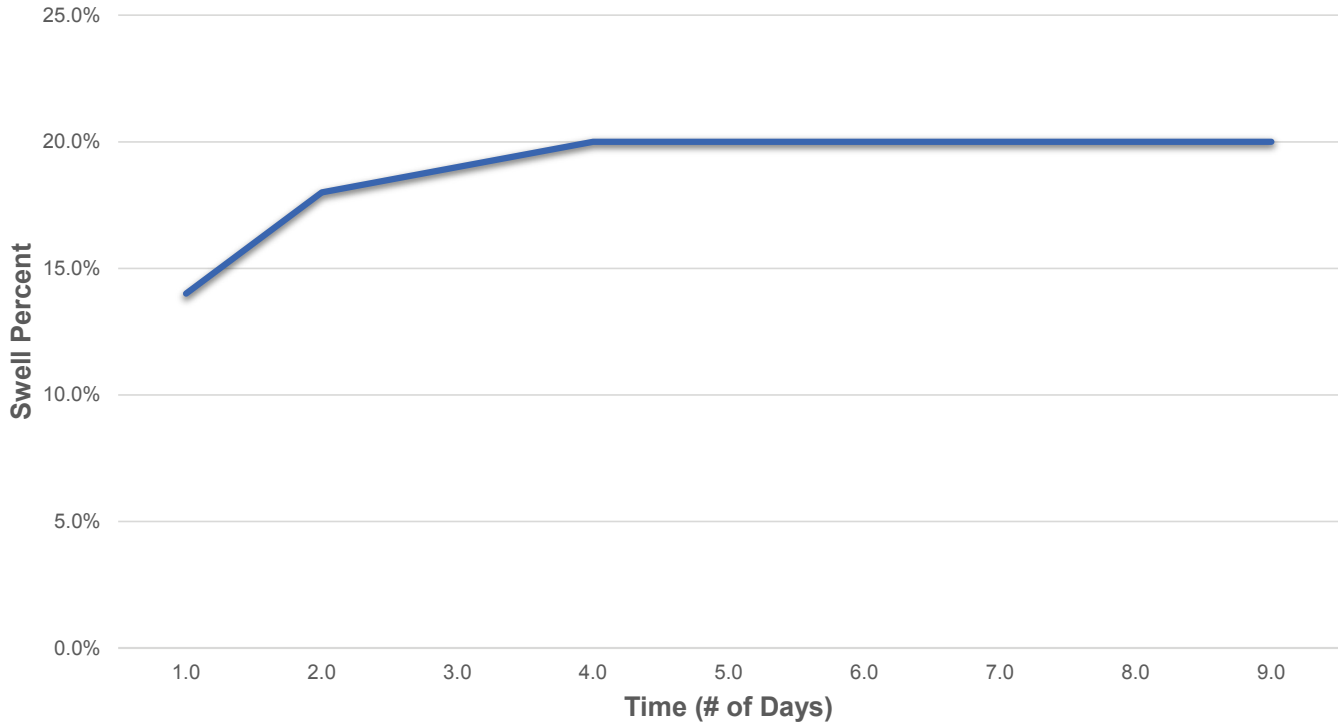

## Available in the Following Thicknesses:

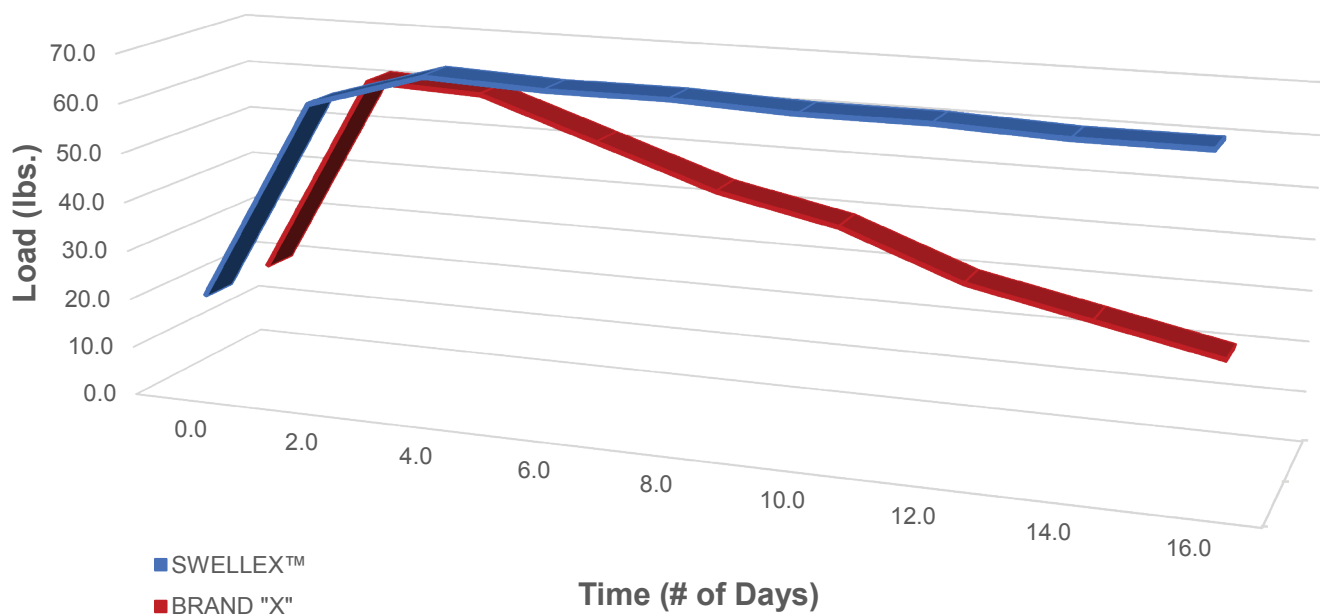

1/64"    1/32"    3/64"    1/16"    3/32"    1/8"

## Durox Gasket Load - SWELLEX™ vs Competition (Submerged in Oil @300°F Starting at 20 lbs load)

# EXHAUST MANIFOLD GASKETS

Durox's High Performance Engine Exhaust Gasket System helps to protect locomotive exhaust systems throughout the entire life cycle.

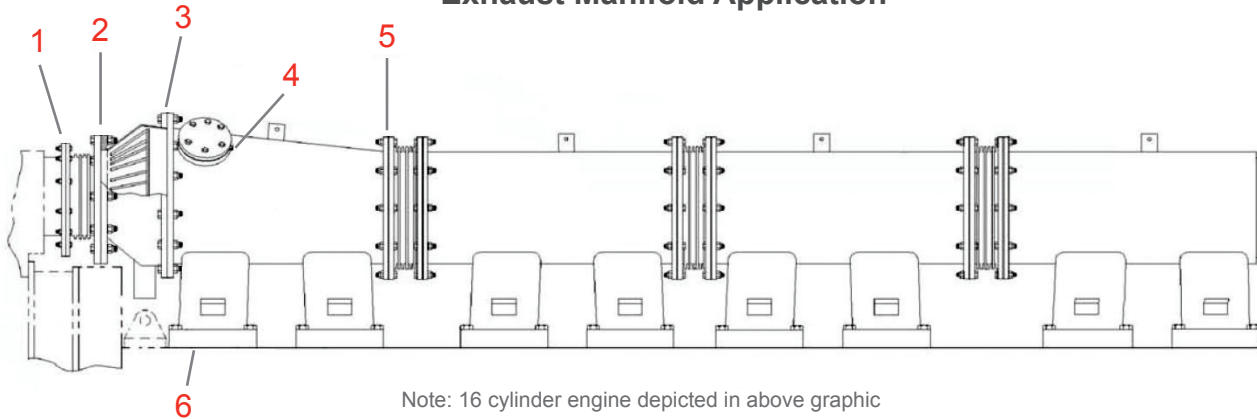

- Preferred by Class I railroads, our high performance chamber to crankcase gasket features a metal jacketed design to aid in protecting the engine crankcase and exhaust manifolds.
- Durox High Performance Exhaust Gaskets utilize an inner graphite core that works effortlessly in extreme temperatures created by the exhaust system.
- When the complete Durox High Performance Exhaust Gasket system is applied, the inner graphite core remains intact throughout the entire life of the exhaust system to ensure proper torque loading and eliminates leaks.

Durox Dark High Performance Graphite

OEM Standard White High Temperature Gasket Material

# HIGH PERFORMANCE FLUOROELASTOMER SEALS

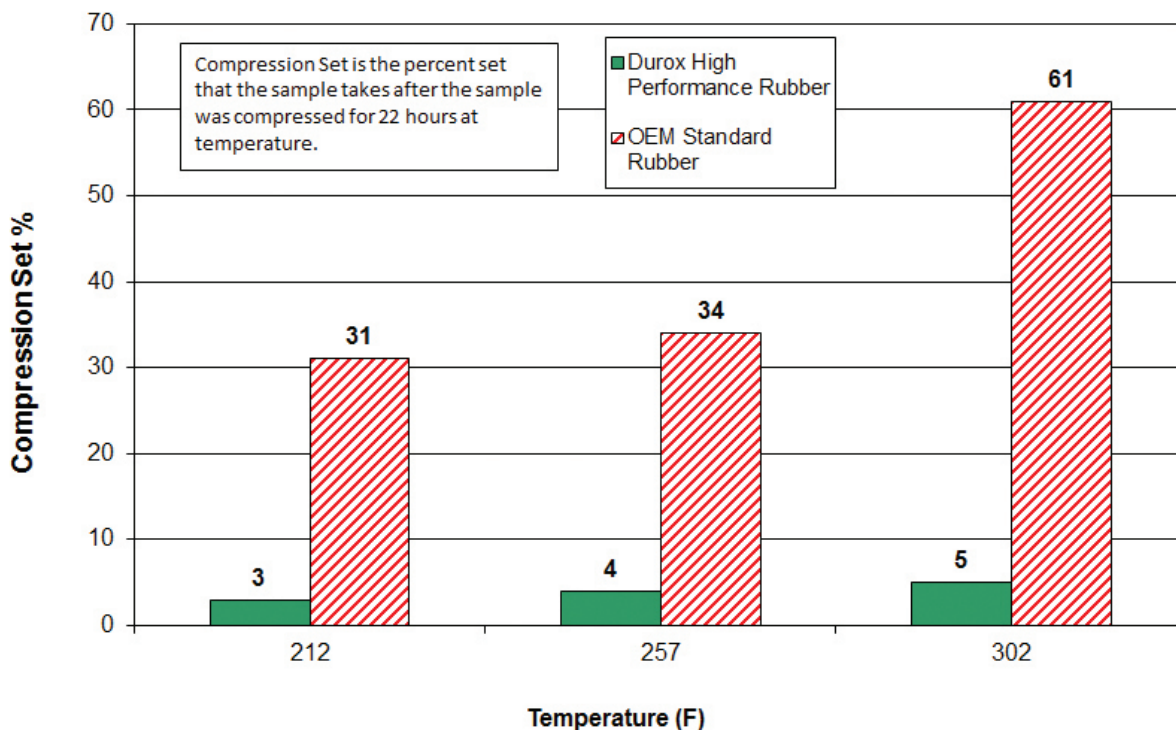

Traditionally, most seals in a locomotive engine are made of Nitrile rubber. While a new Nitrile seal is soft and flexible at temperatures of around 150°F to 180°F, the elastomer that makes the seal flexible starts to bake out of the product. These temperatures are produced by the locomotive engine in normal operation and the result is a hard, cracked rubber product that no longer effectively seals.

Durox has replaced all these traditional seals with High Performance Fluoroelastomer Seals. Fluoroelastomer is a rubber compound that remains soft and flexible at temperatures up to 480°F, a temperature range that the locomotive engine does not produce in normal operation.

Durox green Fluoroelastomer Seals are made in various custom formulations that are designed for specific end-use applications including formulations for pipe coupling gaskets and O-rings.

- The Fluoroelastomer formulation for the “M” type seal is designed with a very high modulus so that the part will resist creep and deformation once it is installed.
- The Fluoroelastomer formulation for the “V” style seal application is designed to have a high resistance to tearing and flex cracking.
- These special formulations are optimized so that the product meets the requirements of the specific application in addition to having outstanding performance in high temperatures and resistance to fuel, oil, water and additives used in the maintenance of locomotive engines.

# TRACTION MOTOR COVERS & GASKETS

Durogard Seals are designed to keep out snow, water, dirt and protect from overhaul to overhaul. Because there is no loss of air, maximum air goes through the engine.

- Resists oil and ozone
- Flexible from 50°F below to 245°F – (snap off old - snap on new)
- Covers and seals available as one
- Prevents flash overs
- Motors are cleaner and run cooler

## Keep Engines Cleaner!

# CLEATS & GROMMETS

## Durox Cable Cleats

Wooden cleats tend to crack and allow moisture to penetrate through to cable. Most existing rubber materials are not dielectric and allow for current to pass from cable to frame.

Durox cleats feature a specially designed, dense rubber compound that prevents water and oil saturation and is dielectric providing complete insulation from cable to frame. Fiberglass cleats also available by special request where increased rigidity is required.

### \*Additional Cleats Available Upon Request

# PRESSURE GAUGES

## Durox “Rugged Heavy” Liquid Filled & Dry Pressure Gauges

**Accuracy:** (+/-) 1.5% full scale on 2 1/2” and (+/-) 1% on scale on 4”

**Crystal:** Shatter resistant plexiglass

**Movement:** All brass

**Bourbon Tube:** Phosphor bronze on 2 1/2” & 316SS on 4” above 800 PSI

**Liquid Filled:** 96% Pure glycerine with 4% distilled water

**Case:** Solid one piece, die cast brass hermetically sealed

**Connection:** 1/4” NPT bottom or back

**Pressure Ranges:** Vacuum and compound to 300 PSI, pressure to 15,000 PSI

**Ambient Temp:** 0° F(-17.8° C) to 180° F(82.2° C) –40° F (-40° C) is available

**Working Pressure:** Should be limited to 60% of dial range

**Application:** Perform extremely well under high vibration, pulsation and shock loading applications. Recommended for all diesel engine applications and all shop applications including: fuel oil, crankcase oil, lube oil, steam, water, gas, air, hydraulic and all other gaseous and liquid media that are non-corrosive to copper alloys.

**Warranty:** Exclusive 3 year warranty on all liquid filled pressure gauges

**Repair:** Gauges are repairable with a 12 month repair warranty

**Options:** Panel mounting or flush

**Also Available:** Standard dry gauges in sizes from 1 1/2” through 4” stainless steel liquid filled gauges in sizes 2 1/2” through 6”.

## Durox Vectors® & Corners

The Durox patented “Vector®” collects oil-splash from the rocker and cam components before it migrates to leak prone areas. Salvaging what normally is “lost lubrication”, the Vector® then redirects oil-flow back to the cam lobes, rocker arm rollers and valve bridge components.

A universal fit and a tool-free application make Durox Vectors® a cost effective method for improving EMD engine performance.

### Helps to Prevent:

- Top-deck gasket leaks
- Upper-deck housing leaks
- Rocker/cam component wear

## Durox Layshaft Seal with Oil Deflector Sleeve

The existing layshaft seal design is a cork gasket that seals for a limited time before it becomes saturated with oil and begins to leak. This is a real problem because of the time required to remove the injector control bracket assembly in order to replace the gasket.

The Durox Layshaft Seal with Oil Deflector Sleeve (#DE11811) is a rubber seal with beads that is impervious to oil. The sleeve acts as an oil deflector that prevents oil from leaking out of the application. The combined rubber seal and oil deflecting sleeve is designed to remain “leak free” from overhaul to overhaul.

#DE11811

# DUROX ENHANCED PRODUCTS

## Durox Self-Torquing Fuel Site Bowl Clevis & Seal Kit

The original design of the fuel site bowl clevis requires users to make a judgment call as to how much torque to apply. Too tight and the glass bowl cracks, too loose and the application leaks - either can result in a fuel leak. In addition, the simple design of the square cut gasket used for the fuel site bowl seal easily allows the bowl to slide off, which also causes leaks.

- **Durox #DE13527: Self-Torquing Clevis** tightens until the proper torque limit is reached and then spins harmlessly, totally eliminating the possibility of under or over-torquing the application.
- **Durox #DE10864: Fuel Sight Bowl Seal** is contoured so that the bowl fits into the seal and eliminates the possibility of it slipping and leaking.
- **Durox #DE32515: Self-Torquing Fuel Sight Bowl Clevis & Seal Kit** eliminates all problems that are associated with this application and will remain “leak free” from overhaul to overhaul.

## Durox Governor Plug Protector

Governor plug failures are often caused by oil and dirt from normal engine operation, strong cleansers and high-pressure water and steam used for engine cleaning; all which can penetrate governor plugs and cause the connectors to short out. The Durox Governor Plug Protector:

- Provides a water-tight seal.
- Protects the plug from penetration by disruptive elements.
- Helps support the cable to relieve stress on the plug connection.
- Is easily installed in the field using the installation tool without removing the plug from the cable.
